

INTRODUCING...

NEW
TRACK & CONTROL OIL USAGE

iTrack

The Intelligent **Oil** Monitoring System

Track and control oil usage

As of 1st February 2012, CFS Ltd will be supplying the brand new i-Track Intelligent Monitoring System in place of all previous electronic gauges on all Harlequin storage tanks. This new, intelligent way to track and control oil and fuel usage works with all common tank shapes and sizes. It helps you control spend by monitoring both litres of oil consumed and cost incurred, presenting information on a daily, weekly, monthly and annual basis. i-Track displays both indoor temperature and oil storage temperature, allowing for more precise adjustment of your heating system. i-Track also calculates the number of days before your oil tank runs empty, allowing time to plan and purchase the next refill at the most competitive price. Visual and audible alarms provide alerts on both fill and loss events, which may indicate fuel theft or a catastrophic fuel loss.

FEATURES

- Compare actual daily spend to two decimal places
- Calculates number of days to empty
- Measures fuel level and calculates volume every seven minutes
- Monitors fuel used, as well as spend on a daily, weekly, monthly and annual basis
- Fuel remaining displayed in litres and as a percentage
- Displays time, date and internal/external temperature
- CO² emissions in kgCO²
- Portable – battery operated - use in any room
- Easy installation with no expert knowledge required
